

Design and Manufacture of Anti-Gravity Plates

Gh. Saleh

Saleh Research Centre, Netherlands

As is well known, the flow of electrons or, in other words, the electric current can create magnetic fields in the solenoid. Magnetic fields can cause electrons to flow through solenoid and produce electric current too. If the electric current reaches a specific value, a magnetic field could be created. Indeed, the magnetic and electric fields have the homogeneity properties of energy.

Based on Saleh Theory magnetic waves have frequency in rang of 10^{16} Hz and gravity in range of 10^{18} Hz.

Considering the chained structure of both magnetic and gravitational waves, if we can change the frequency of magnetic waves and increase it to about 10^{18} Hz (approximately 100 times), we can say that we have created artificial gravitational waves; Waves that have the ability to overcome gravity.

According to the relationship mentioned in the article If we increase the electric current 10 times, the frequency increases a hundred times. In this paper, by using this artificial Anti-Gravity we have provided a structure for making anti-gravity plates.
